## Actuarial Certification

As the Actuary for the New York State and Local Employees' Retirement System (ERS), the New York State and Local Police and Fire Retirement System (PFRS) and the Group Life Insurance Plan (GLIP), known collectively as the "System," it is my duty to ensure that the System properly funds the benefits of member, retirees, and beneficiaries.

The System uses an aggregate funding method which has a funding objective of employer contributions that, over time, are a level percentage of payroll. Every April 1st an Actuarial Valuation is conducted to determine employer contribution requirements for the next succeeding fiscal year. In preparation for the valuation, the System participant data is validated by running reasonableness tests and a participant reconciliation accounting for every individual on a year-over-year basis. The information contained in the financial statements is also reviewed.

Proper funding requires that liabilities and employer contribution rates are developed using reasonable actuarial assumptions and methods. Actuarial assumptions are grouped into two broad categories: demographic assumptions (rates of employee turnover, disability, mortality, and retirement) and economic assumptions (interest rates, inflation, and salary growth).

The Actuary performs annual experience studies, ascertaining how closely the System's experience is conforming to the assumptions. If significant differences occur that the Actuary believes may indicate permanent shifts, the Actuary may recommend assumption changes.

An Actuarial Advisory Committee meets annually to review the actuarial assumptions and the results of the actuarial valuation. The System also retains an external auditor to independently review its financial records every year, as well as engages the services of an outside actuarial consultant to perform a review every five years. Similarly, every five years, the System is audited by the New York State Department of Financial Services. Lastly, the State Comptroller, in his role as sole trustee of the System, established an Office of Internal Audit to help fulfill his fiduciary duties and these auditors periodically review the actuarial bureau's processes.

I hereby certify that, to the best of my knowledge and belief, this report is complete and accurate in fulfilling the requirements of the New York State Retirement and Social Security Law Section 11(d) and has been prepared in accordance with generally recognized and accepted actuarial practices which are consistent with the principles prescribed by the Actuarial Standards Board as well as the Code of Professional Conduct and Qualification Standards for Actuaries Issuing Statements of Actuarial Opinion of the American Academy of Actuaries, of which I am a member. In addition, the assumptions and methods meet the parameters set for disclosures by Governmental Accounting Standards Board (GASB) Statements No. 67 and 68.

Aaron Schottin Young, MA, FSA, EA, MAAA
Retirement Systems Chief Actuary

## Executive Summary

This report summarizes the New York State and Local Employees' Retirement System's (ERS) and Police and Fire Retirement System's (PFRS) April 1, 2023 actuarial valuations for employer contributions payable in fiscal year 2025. Unless otherwise stated, all calculations are based on an assumed contribution payment date of February 1, 2025, two months before the end of the fiscal year (FYE).

## Major Experience and Assumptions for the April 1, 2023 Valuation

The Investment Section of the Annual Comprehensive Financial Report provides the asset allocation policy and these total fund rates of return as of March 31, 2023.

1-year average: -4.14\%
5-year average: $7.50 \%$
10-year average: 8.02\%
March 31, 2020 ended the most recent experience study quinquennial cycle, at which time actuarial assumptions are subject to a more comprehensive analysis. Mid-cycle revisions are less common. However, the quinquennial review left economic assumptions unchanged, so the subsequent April 1, 2021 valuation revisited and revised the discount rate, CPI-U, and PFRS salary scale assumptions. The April 1, 2022 valuation further increased the CPI-U assumption. The mortality improvement assumption is typically kept current with the Society of Actuaries' table, currently MP-2021. Current economic assumptions include:

Assumed rate of inflation of 2.9\%
Assumed actuarial rate of return of 5.9\%
Assumed system-average salary increase of $4.3 \%$ in ERS and $5.7 \%$ in PFRS
See the 2023 and prior year's Actuarial Assumptions reports. A new section covering Risk Disclosures is included in the 2019 and subsequent reports.

Employer contribution rates vary by plan and tier. The projected system averages displayed below are extracted from Table 19. Bills are based on known salaries for the period 4/1/2023 through 3/31/2024 (a legislative change under Chapter 94 of the Laws of 2015). Non-state employers must pay their bill by February 1, 2025, the State by March 1, 2025.

Average Employer Contribution Rates

| FYE | ERS | PFRS |
| :---: | :---: | :---: |
| 2025 | $15.2 \%$ | $31.2 \%$ |
| 2024 | $13.1 \%$ | $27.8 \%$ |
| 2023 | $11.6 \%$ | $27.0 \%$ |

Between 2024 and 2025, billing rates will experience upward pressure due to economic forces (investments, inflation, and salary increases), demographic shifts, and improved processing following the redesign project (administrative rate increase, and actuarial data extraction improvements). Some rate relief will be provided by the FYE 2022 investment returns, and new entrants with less lucrative benefits.

Employer contribution rates are determined using the aggregate funding method. The actuarial value of assets (AVA) was determined by applying an eight-year smoothing method to the financial statement plan net position (see page 18), following a market restart (setting the AVA equal to the market value of assets) with the April 1 , 2021 valuation.

Pensioner mortality, active member rates of decrement, and other demographic assumptions are developed from the system's experience, with the exception of the assumed mortality improvement rates developed by the Society of Actuaries.

The new entrant employer contribution rates for the largest groups are:

| ERS | Tier 4 | $16.7 \%$ |
| :---: | :---: | :---: |
|  | Tier 5 | $14.4 \%$ |
|  | Tier 6 | $10.7 \%$ |

|  | Tier 2 | $28.0 \%$ |
| :--- | :--- | :--- |
| PFRS <br> 384-e | Tier 5* | $23.8 \%$ |
|  | Tier 6* | $19.3 \%$ |
| *When member contributions are required. |  |  |

## Monetary Data

in millions of dollars as of 4/1/2023

|  | ERS | PFRS | Total |
| :--- | ---: | ---: | :---: |
| Present Value of Benefits | $\$ 276,603$ | $\$ 56,463$ | $\$ 333,066$ |
| Net Assets Available for Benefits (MVA) | 211,183 | 38,325 | 249,508 |
| Smoothing Adjustment | 17,018 | 3,070 | 20,088 |
| Actuarial Value of Assets (AVA) | 228,201 | 41,395 | 269,596 |
| Dedicated Assets (e.g. GLIP) | -164 | -75 | -239 |
| Valuation Assets | 228,037 | 41,319 | 269,356 |
| Employee Contributions for FYE 2023 | 565 | 92 | 657 |
| Employer Contributions for FYE 2023 | 3,306 | 1,098 | 4,404 |
| Estimated Employer Contributions for FYE 2024 * | 3,921 | 1,166 | 5,087 |
| Projected Employer Contributions for FYE 2025 * | 4,803 | 1,403 | 6,207 |
| Billable Salary (4/1/2022-3/31/2023) | 29,934 | 4,185 | 34,119 |

* Contributions as of $2 / 1$ excluding various amortization, deficiency, incentive and reconciliation payments.

Numbers may not sum to Total due to rounding.

Participant Data
as of $3 / 31 / 2023$

|  | ERS | PFRS | Total |
| :--- | ---: | ---: | ---: |
| Total Active Members (receiving salary at FYE 2023) | 481,547 | 32,603 | 514,150 |
| Total Members (includes those vested) | 659,750 | 35,754 | 695,504 |
| Pensioners and Beneficiaries | 474,561 | 40,068 | 514,629 |
| Total Participants ** | $1,134,311$ | 75,822 | $1,210,133$ |
| Number of Employers with Active Members | 3,038 | 461 |  |
| Average Age of Active Members | 46 | 39 |  |
| Average Service Credit of Active Members (in years) | 11.1 | 12.1 |  |
| Average Annual Salary of Active Members | $\$ 60,264$ | $\$ 123,196$ |  |
| Average Age of New Service Retirees (in years) | 63 | 53 |  |
| Average Service of New Service Retirees (in years) | 23.2 | 25.4 |  |
| Average Benefit Payments - New Retirees * | $\$ 32,267$ | $\$ 87,663$ |  |
| Average Benefit Payments - All Retirees \& Beneficiaries * | $\$ 27,227$ | $\$ 60,592$ |  |

* Amount paid reflects any reduction for option selected and any applicable increase for COLA.
** The estimated total participant count as of 9/30/2023 is $1,220,654$.

## Description of the New York State and Local Retirement System (NYSLRS)

## Overview of the System

On January 1, 1921, with an appropriation of $\$ 25,000$, the New York State Employees' Retirement System was created and codified in Article 4 of the New York State Civil Service Law (Laws 1920, Chapter 741). Over the next 33 years, civil servants eligible for membership expanded, benefits evolved, and more municipalities elected to participate in the retirement system. Effective July 1, 1955, the relevant laws were removed from the Civil Service Law and placed in a newly created Retirement and Social Security Law (Laws 1955, Chapter 687) and the retirement system was renamed the New York State and Local Employees' Retirement System, better reflecting the collection of participating employers. Then, on April 1, 1967, the Police and Fire Retirement System was created (Laws 1966, Chapter 1000) and the eligible members employed by organized police and fire departments were transferred into the newly formed retirement system. Finally, on May 8, 1970, the Group Life Insurance Plan was created (Laws 1970, Chapter 581) to guarantee more favorable tax treatment on the first $\$ 50,000$ of any death benefit payable to beneficiaries upon the death of a member.

These three entities, the New York State and Local Employees' Retirement System (ERS), the New York State and Local Police and Fire Retirement System (PFRS), and the Group Life Insurance Plan (GLIP), are collectively referred to as the New York State and Local Retirement System (NYSLRS or the System).

Since its inception in 1921, the Comptroller of the State of New York (Comptroller) has been the administrative head of NYSLRS, and all three entities individually. All net assets of the System are held in the Common Retirement Fund, of which the Comptroller is the sole trustee. Aside from the Comptroller, only one position was statutorily required in the administration of the System: The Actuary. The duties of the Comptroller and the role of the Actuary are contained in Section 11 and Section 311 of the Retirement and Social Security Law. The requirements of this annual report are included in subdivision d of both Sections.

The System provides benefits under the New York State Retirement and Social Security Law (RSSL) and these benefits are guaranteed by the New York State Constitution. Employer Participation in the System cannot be terminated, and plan benefits cannot be diminished or impaired. Benefits can be reduced for future members only by an act of the New York State Legislature. Once an employer elects to participate in the System, the election is irrevocable.

Members of the System are employees of New York State and its municipalities, excluding employees of New York City (who are members of the five New York City Retirement Systems) and teachers in school districts (who are members of the New York State Teachers' Retirement System). The ERS and PFRS are cost-sharing multiple-employer defined benefit plans. Due to the non-diminishment of benefits requirement, the System has six tiers of membership in ERS and five tiers in PFRS. There are various plans within each tier. The vast majority of ERS members are covered by age-based plans that require attainment of age 55 , plus a minimum of 5 years of service credit, before service retirement benefits are payable. The vast majority of PFRS members are covered by service-based plans that require attainment of 20 years of service credit, but no age requirement, before service retirement benefits are payable.

For a further description of the plans, see Section 1 of the Notes to Basic Financial Statements found in the Annual Comprehensive Financial Report.

## Plan Qualification under the Internal Revenue Code

A governmental plan is qualified under Internal Revenue Code (IRC) Section 401(a). The plans administered by the NYSLRS, including the New York State and Local Employees' Retirement System and the New York State and Local Police and Fire Retirement System, are qualified under IRC Section 401(a) as governmental plans.

As a governmental plan, the System is exempt from the requirements of the Employees Retirement Income Security Act (ERISA). This exemption is an indispensable component of the System's status as a "qualified plan." Qualified plan status is required to enjoy important tax benefits. Losing these tax benefits would substantially impair the System's value to the more than 1.2 million participants. This warrants due diligence regarding anything that may jeopardize the System's status as a "qualified plan."

There are several examples of commonly occurring Internal Revenue Service (IRS) plan qualification issues associated with legislative proposals improving member benefits:

1. Granting any amount of service credit towards retirement in a 20 -year plan for employment that is not qualified public safety. This includes employment as a correction officer, emergency medical technician, and even some types of deputy sheriffs.
2. Granting any amount of service credit in the New York State and Local Police and Fire Retirement System (PFRS) for employment that was not rendered in the PFRS, because service rendered outside the PFRS may not be considered public safety employment.
3. Granting any amount of service credit for employment rendered outside of NYSLRS or another qualified governmental plan, including work for a public employer as an independent contractor.
4. Permitting non-governmental organizations (including private employers) to participate in NYSLRS. This includes certain types of educational institutions, libraries, volunteer organizations, and ambulance operations.

The most recent determinations performed by the Internal Revenue Service were completed in August of 2014 for both ERS and PFRS. Both systems were given favorable determinations based on the information supplied with the application submitted by the Systems.

## Historical Legislation Revising Benefit Structures

The New York State Constitution protects members of NYSLRS from the diminishment of any benefit, right, or privilege. The enactment of benefit enhancements, typically during periods of financial strength, can create permanent increases in the cost of the pension promises; these benefit enhancements generally improve benefits retrospectively. Should the NYS Legislature and Executive seek to reduce the cost of fringe benefits, including the cost of pensions, a new "tier" of benefits must be created for future members. The benefits afforded to current members cannot be curtailed.

When implemented, each new tier represents a benefit reduction compared to prior tiers. However, over time, there may be a roll-back of the reductions implemented. This section aims to summarize this evolution of benefits in the System beginning with Tier 4 in ERS (created by Chapter 414 of the Laws of 1983) and Tier 2 in PFRS (created by Chapter 382 of the Laws of 1973). ${ }^{1}$

Chapter 453 of the Laws of 1988, effective August 1, 1988, provided benefit enhancements to certain members of PFRS Tier 2 by granting benefit accruals after attaining retirement eligibility under Section 384-d. While the enhancement, Section 384-e, was electable by participating employers, most PFRS members became covered.

Chapter 537 of Laws of 1994, effective September 25, 1994, provided benefit enhancements to members of ERS Tier 4 by granting an unreduced service retirement to members aged 55 years with 30 years of service credit. Before this benefit enhancement, a member could commence benefit payments at age 55 but the amount paid annually would be less than if the member waited until normal retirement age of 62 .

In the early 2000s, after a decade of low employer contribution rates, the NYS Legislature and Executive passed a wave of new legislative measures aimed to provide pension and death benefit enhancements for active members and retirees within the System. The new laws affected the amount of retirement service creditable, established better death benefits, and attempted to provide more equity among the System's tiers.

Chapter 125 of the Laws of 2000 provided benefit enhancements to current and future retirees of ERS and PFRS. The law provided a formal Cost of Living Adjustment (COLA) program, increasing retirement benefits payable annually by an amount equal to $50 \%$ of the annual inflation, subject to a floor of $1 \%$ and a cap of $3 \%$, multiplied by the first $\$ 18,000$ of a retiree's single life allowance. If a lifetime continuance is payable to a spousal beneficiary after the member's death, half of the member COLA is payable. To receive COLA, a retiree must satisfy one of the following (1) attain age 62 and retired for at least five years, (2) attain age 55 and retired for at least ten years, or (3) be retired under a disability for at least five years. The beneficiary of an ERS accidental death benefit is also eligible to collect the member's full COLA after five years. The program also provided a "catch-up" adjustment payable for those who retired prior to 1997.

[^0]Chapter 126 of the Laws of 2000 provided benefit enhancements to members of ERS. The law (1) provided members of Tier 1 and Tier 2 covered by age-based plans with one month of additional service credit for each year of service credit rendered, up to a maximum of 24 months, and (2) provided members of Tier 3 and 4 with a cessation of the $3 \%$ required member contributions after attaining 10 years of membership or service credit, whichever is earlier.

Chapter 86 of the Laws of 2000 created a one-time retirement incentive for members of ERS. The incentive (1) provided one month of additional service credit for each year of service credited as of the date of retirement, up to a maximum of three years, and (2) provided service retirement benefits to certain members who would not otherwise be eligible.

Chapter 553 of the Laws of 2000 provided benefit enhancements to members of ERS Tier 4 by reducing early service retirement reduction factors. This improved the service retirement benefit payable to members retiring before attaining normal retirement age of 62 with less than 30 years of service credit. Note that members with 30 years of service credit were already eligible for a fully unreduced early retirement benefit at age 55 .

Chapter 551 of the Laws of 2000 provided death benefit enhancements to members of PFRS by eliminating the "death gamble" posed by continued employment after service retirement eligibility.

Chapter 554 of the Laws of 2000 provided death benefit enhancements to current members of ERS and PFRS and modified the death benefit for future ERS members hired after December 31, 2000.

Chapter 548 of the Laws of 2000 provided benefit enhancements to members of ERS and PFRS. The law allowed crediting of up to three years of service credit for military service performed during specific periods of military conflict. The law was later expanded by Chapter 41 of the Laws of 2016 to include any military service, regardless of presence in a conflict. To obtain the military service credit, members contribute $3 \%$ of their current compensation for each year of military service credited. ${ }^{2}$

Collectively, these benefit enhancements enacted in the 2000 legislative session were estimated to increase employer contributions by approximately $\$ 450$ million dollars upfront, plus recurring annual costs of $\$ 1.31$ billion. In the FYE 2000, the annual billable salary was estimated at $\$ 18.1$ billion, meaning that these benefit enhancements, which predominantly added value retrospectively, increased the average long-term billing rate by an estimated $7.2 \%$ every single year, prospectively.

Specific to ERS, the expected long-term billing rate in ERS for Tier 4 Article 15 benefits was $10.9 \%$ before the benefit improvements. The employer contribution requirement increased $\$ 1.21$ billion annually, spread over a billable salary base of $\$ 16.0$ billion, thereby increasing the annual compensation package by $7.6 \%$ of salary. The long-term billing rate would need to increase to $18.5 \%$ to finance the enhancements. The cost of the Tier 4 benefit before the year 2000 was approximately $60 \%$ of the cost of the benefit after the enhancements.
${ }^{2}$ In the future, the member contribution requirement became $6 \%$ of salary for Tier 6 members.
$8 \mid$ Section I: Administrative History and Elements of the Valuation

Specific to PFRS, the expected long-term billing rate in PFRS for Tier 2 benefits under 384-d was $19.9 \%$ before the benefit improvements. The employer contribution requirement increased $\$ 100$ million annually, spread over a billable salary base of $\$ 2,100$ million, thereby increasing the annual compensation package by $4.8 \%$ of salary. The long-term billing rate would need to increase to $24.7 \%$ to finance the enhancements. The cost of the Tier 2 PFRS benefit before the year 2000 was approximately $80 \%$ of the cost of the benefit after the enhancements.

Ten years later, these benefit enhancements proved unsustainable, and another round of sweeping pension reform was passed by the NYS Legislature to curtail costs and pension benefits for new members. This led to the creation of Tier 5 in January of 2010 and ultimately Tier 6 on April 1, 2012. These new tiers were more closely aligned with the benefits afforded before the year 2000.

The major benefit revision in defining Tier 5 was reinstituting the $3 \%$ member contribution requirement for the member's entire career. In ERS, additional savings were captured by reestablishing early retirement benefit reductions when members retire before normal retirement age of 62 , although those benefit reductions continued to be subsidized. In PFRS, additional savings were captured by limiting members' ability to spike pensionable salary shortly before retirement. The value of Tier 5 benefits was estimated to be $80 \%$ of the value of the predecessor benefits in both systems.

The major benefit revision in defining Tier 6 was implementing variable member contribution requirements (between $3 \%$ and $6 \%$ ) for the member's entire career. In ERS, additional savings were captured by reducing the benefit accrual rate, increasing normal retirement age to 63 , and moving closer to an actuarially equivalent early retirement benefit. In PFRS, additional savings were captured by further limiting members ability to spike pensionable salary shortly before retirement and capping pensionable earnings at the Governor's salary. The cost of current Tier 6 benefits in ERS are approximately $60 \%$ the cost of Tier 4 benefits, while the cost of Tier 6 benefits in PFRS is approximately $80 \%$ the value of Tier 2 benefits.

Since the creation of Tier 5 and Tier 6, only one major systemwide benefit enhancement has been implemented.
Chapter 56 of the Laws of 2022, effective April 1, 2022, reduced the time to be fully vested from 10 years to five years for active members of Tier 5 and Tier 6.

## Additional Detail Regarding Current Benefit Structures

A collection of retirement plan publications providing comprehensive information about all the benefits members are entitled to receive under each plan administered by NYSLRS is available on the Publications page.

The following summaries by retirement system focus on key benefits of actuarial interest that are descriptive of the features inherent in most plans. The summary is not intended to be exhaustive, and some details may not apply to all plans.

## Employees' Retirement System

Tier 3 and 4 members must contribute 3\% of their annual salary until they have 10 years of service or membership in the System. Tier 5 members must contribute $3 \%$ of their annual salary for all years of public service. Tier 6 members must contribute between $3 \%$ and $6 \%$ (based on their annual earnings two years prior) for all years of public service. Members receive $5 \%$ annual interest on their contributions. Vested members may withdraw their member contributions in lieu of a benefit if they have less than 10 years of service.

Membership ceases for non-vested members after seven years of inactivity. If member contributions have not been withdrawn, interest will cease accruing when membership ceases. Membership also ceases after a member has withdrawn their employee contributions.

Spousal beneficiaries receiving lifetime benefits after the death of the retiree will receive one-half of the cost-ofliving adjustment that the retiree would have received if the retiree was alive.

For Tiers 1 through 5, final average salary (FAS) is defined as the average of the three highest consecutive years. Salary for any given year in the FAS calculation cannot exceed a $10 \%$ increase of the average of the two previous years. In the last year, a lump sum for unused vacation days (up to a maximum of 30 ) can be added as salary, but the salary limitation still applies. For Tier 6, the FAS is defined as the average of the five highest consecutive years. Salary for any given year in the FAS calculation cannot exceed a $10 \%$ increase of the average of the four previous years. A lump sum for unused vacation days cannot be added to salary. The Tier 6 salaries used in calculating the FAS are also limited to the Governor's salary, which was $\$ 179,000$ in fiscal year 2013. The Governor's salary remained at $\$ 179,000$ until it was increased to $\$ 200,000$ effective January 1, 2019. Subsequently, the Governor's salary was increased to $\$ 225,000$ effective January 1, 2020, and \$250,000 effective January 1, 2021. The Governor's salary has remained at $\$ 250,000$ thereafter.

For employers that have elected the sick leave benefit, unused sick days can increase the amount of service credit by a maximum of 0.77 years for Tiers 1 through 5 and certain cases of Tier 6 and a maximum of 0.38 years for the majority of Tier 6 . Such credit cannot be considered in meeting any service requirements to qualify for an improved benefit.

Ordinary death benefits are three times salary payable in a lump sum. The first $\$ 50,000$ of an ordinary death benefit is paid by the GLIP. For some members, if eligible to retire at the time of death, the lump sum increases to the value of the service retirement pension.

Accidental death benefits are annual pensions of $50 \%$ of salary payable to spouses, children (until age 25), and certain other dependents.

## Police and Fire Retirement System

RSSL Section 384-e members can receive an additional one-sixtieth (1.67\%) of final average salary for each year of service beyond 20 years (maximum of 12 years).

Spousal beneficiaries receiving lifetime (non-accidental death) benefits after the death of the retiree will receive one-half of the cost-of-living adjustment that the retiree would have received if the retiree was alive.

For Tiers 1 through 5, final average salary (FAS) is defined as the average of the three highest consecutive years. Salary for any given year in the FAS calculation cannot exceed a $20 \%$ increase of the average of the two previous years. For Tier 6, FAS is defined as the average of the five highest consecutive years. Salary for any given year in the FAS calculation cannot exceed a $10 \%$ increase of the average of the four previous years.

There are additional plans available within each system and tier, including various 25 -year plans. The main difference is in the calculation of the service retirement benefit. The other tiers have differences in the service retirement benefit, employee contributions, service credit, disability and death benefits, and final average salary definitions. There are more than 50 different major plans. Within a major plan, there may be other plans that have small differences in benefits.

Accidental disability benefits are an annual benefit of $75 \%$ of final average salary less Workers' Compensation.
Performance of duty disability benefits are an annual benefit of $50 \%$ of final average salary.
Ordinary death benefits are three times salary payable in a lump sum. The first \$50,000 of an ordinary death benefit is paid by the GLIP. If the member is eligible to retire at the time of death, the lump sum increases to the value of the service retirement pension.

Accidental death benefits are annual pensions of $100 \%$ of salary payable to spouses, children (until age 18 or 23 if a student), and certain other dependents. Three percent annual escalation is also provided.

## Determination of Employer Contribution Billing Rates

Annually, participating employers in NYSLRS are responsible for making a payment to NYSLRS to fund the normal costs for pension benefits, plan administration costs, and group term life insurance benefits. Each of the three rates are quoted as a percentage of billable salary, in keeping with the fact that pension benefits are proportional to member salary. The sum of these three rates is called the Total Rate.

## Overview of the Actuarial Funding Methodology Determining the Normal Costs for Pension Benefits

As a governmental plan, NYSLRS is exempted from the requirements of ERISA (see "Plan Qualification under the Internal Revenue Code") including IRC Section 412, which establishes funding requirements under ERISA.

The NYSLRS funding method follows the statutory requirements of the State, established under RSSL Section 23(b)(1) and Section $323(b)(1)$. The authority to change the funding policy of NYSLRS is possessed solely by the Comptroller of the State of New York, in their capacity as sole administrator of the NYSLRS. See "Historical Legislation Impacting the Calculation of the Employer Billing Rates" for additional details.

The funding method used at NYSLRS could be described as a modified Aggregate Method. A Systemwide Basic Rate calculated under the Aggregate Method is scaled by a Plan Index multiplier that differentiates billing rates by tier-plan combinations to ensure contribution requirements are aligned with the relative value of benefits offered.

The value of the System Employer Contributions is derived using the basic funding formula:

$$
\text { Benefits }+ \text { Expenses = Investments + Contributions. }
$$

Expenses are paid as incurred, not pre-funded like the pension promise, so the term is dropped when calculating the employer billing rates. The contributions required are shared by employees and employers. Employee contributions are established by law and do not vary year-to-year; they are predictable.

Benefits $=$ Investments + Employee Contributions + Employer Contributions
Then, solving for employer contributions, the formula becomes
Employer Contributions $=$ Benefits - Investments - Employee Contributions
The RSSL requires that, at the system level, Employer Contributions are collected as a level percentage of the compensation paid over the career of the System's membership. This billing rate is called the Basic Rate. The Basic Rate is defined at the System level, as

$$
\text { Basic Rate }=\frac{\text { Systemwide Employer Contributions }}{\text { Systemwide Billable Compensation }}
$$

At its core, this definition of the Basic Rate follows the principles of an Aggregate Method.

Over the past 100 years, the number of tiers and plans administered by NYSLRS has increased. Today, NYSLRS administers hundreds of different plans, and each plan offers a different level of benefits (called plan lucrativeness). Charging the same Basic Rate for all plans would force employers providing less lucrative plans to overpay for the benefits provided while employers offering more lucrative plans would underpay for the benefits provided.

Ignoring long-term consequences, this subsidization would not be fair to the participating employers. The different plan-level billing rates need to vary in proportion to the plan's relative lucrativeness. The relative plan lucrativeness is called the Plan Index.

$$
\begin{aligned}
& \text { Plan Billing Rate }=\text { Basic Rate *Plan Index } \\
& \text { Plan Billing Rate }=\frac{\text { Systemwide Employer Contributions }}{\text { Systemwide Billable Compensation }} * \text { Plan Index }
\end{aligned}
$$

From a funding perspective, the Basic Rate * Plan Index method effectively balances the need for administrative simplicity (when confronted with extreme complexity in plan design and the enormous scale of billing more than 3,000 participating employers) with a desire for equitable employer contributions. The rates established are intuitive and reasonably ensure that each employer is paying their fair share of the system-wide contributions required to adequately fund the pension provided to their employees. And, as required by the RSSL, the billing rate is presented as a level percentage of the compensation paid to their employees; if all actuarial assumptions were perfectly met, the plan billing rate charged to each employer would never change.

## Components of the Actuarial Funding Methodology Determining the Normal Costs for Pension Benefits

## The Actuarial Value of Assets (AVA)

In determining the annual employer billing rates, the value of the assets held for payment of pension benefits must be estimated. While a variety of values are readily available, actuaries give special consideration to the fact that pension funding is a long-term endeavor and therefore a degree of stability in contribution requirements is appropriate both practically and theoretically. Therefore, for the funding of pension benefits, the NYSLRS Retirement Systems Chief Actuary applies adjustments to the asset values reported in the financial statements to improve stability of the employer billing rates charged year-over-year. This adjusted asset value is called the Actuarial Value of Assets (AVA). The adjustments applied mean that the AVA will differ from the System's reported assets appearing in other financial disclosures and NYSLRS publications.

While the AVA should reasonably represent the Fair Value (FV) of the net assets held in trust for pension benefits, as reported in the financial statements, using the FV without adjustment would generate unwarranted volatility in employer billing rates. Therefore, a smoothing adjustment is applied to the FV in calculating the AVA, which limits the billing rate impact due to volatility in the fair value of assets by recognizing unexpected gains and losses over eight years. The details of the calculation of the Actuarial Value of Assets can be found later in this section.

## The Actuarial Present Value Future Benefits (PVFB)

An actuarial liability is the value of the benefits expected to be paid to current members, retirees, and beneficiaries. The actuarial present value of future benefits is calculated by projecting the amount of future retirement, death, and disability benefits to be paid (based on past and future service) and then discounting for interest earnings, employee turnover, and other contingencies.

It is generally helpful to think of the Present Value Future Benefits in two pieces:

$$
\begin{aligned}
\text { Present Value Future Benefits (PVFB) } & =P V \text { Accrued Liability }(A L)+P V \text { Future Costs (FC) } \\
& =P V \text { Accrued Liability }(A L)+P V \text { Sum Future Annual Costs (इFAC) }
\end{aligned}
$$

The PVFB is the current liability associated with the member/group. It represents the value of the retirement benefit, including future salary increases and future service accruals, discounted to present.

The AL represents the costs associated with prior service. That is, money that should have been collected in prior periods to secure the benefit promise. The AL is a retrospective cost.

The FC represents the costs associated with future service accruals. That is, money that will need to be collected in future years to secure the benefit promise. The FC is a prospective cost.

Funding is an action, guided by actuaries, that decides how quickly contributions must be collected to secure the benefit promise. Actuaries use a variety of assumptions that give the funding effort a structure and predictability. Any acceptable funding method will, fundamentally, require contributions to be paid fast enough to maintain a level of assets that is sufficient to pay the AL.

The funding method decides how much of the PVFB is deemed an AL and how much is deemed an FC. Actions that increase the AL create a funding shortfall that erodes the funded position of the plan. Increases in the FC do not create a funding shortfall because contributions can be increased to offset the cost, but the higher cost will increase the risk that the benefit will become unaffordable in the future (see "Historical Legislation Revising Benefit Structures").

Under the aggregate funding method, the difference between the total present value of future benefits and the actuarial value of assets is funded as a level percentage of salary over the future working lifetimes of current members.

## Determination of the Administrative Billing Rate

The cost of administering the System has been borne by the State and Local employers on a current disbursement basis (that is, PAY-GO funding) on a two-year lagged basis to align with the calculation and application of the normal cost billing rates.

## Determination of the Group Term Life Insurance Billing Rate

The New York State Public Employees Group Life Insurance Plan (GLIP) provides for the first \$50,000 of member and certain post-retirement death benefits to be paid as life insurance. All benefits provided are on a one-year term insurance basis. The plan pays benefits as deaths occur and participating employers are billed each year based on the aggregate anticipated claims for the plan year. Premiums are set so that the reserve will, at its lowest amount during the year, be approximately equal to payables. GLIP commenced paying the first $\$ 50,000$ of post-retirement ordinary death benefits on April 1, 1996. GLIP also pays the first $\$ 50,000$ of death benefits for out-of-service members with at least 10 years of service.

## Determination of Deficiency Costs

When a new employer joins the System, any past service liability is paid for by separate payments for up to 25 years. These payments are known as an employer's deficiency contribution.

## Annual Contribution Rate Comparability

For comparability, unless stated otherwise, rates in this report assume that contributions are to be paid when local employer bills are required to be paid (February 1 of each fiscal year). Generally, the State pays its bill before its statutory due date of March 1 during each fiscal year. Rates are the sum of the normal cost rate, the administrative cost rate, and the group term life insurance rate.

## Historical Legislation Impacting the Calculation of the Employer Billing Rates

Between 1921 and 1990, the actuarial funding method used by the System was the aggregate method, generally following the principles detailed in the "Overview of the Actuarial Funding Methodology determining the Normal Costs for Pension Benefits." Through the enactment of Chapter 210 of the Laws of 1990, the NYS Legislature and the Executive compelled NYSLRS to alter the funding method to a modified projected unit credit (PUC) method beginning with the fiscal year ending (FYE) 1991 billing. This law was challenged by the Comptroller as a violation of the New York State Constitution and the Comptroller's fiduciary responsibility and authority to set funding policies for the System. Ultimately, the New York State Court of Appeals unanimously agreed with the Comptroller's position and struck the law, ruling that under the New York State Constitution the Legislature and Executive cannot lawfully impose a funding methodology on the Comptroller as trustee. NYSLRS promptly returned to the aggregate funding method, beginning with the FYE 1995 billing, and continuing to the present. However, the PUC language introduced by Chapter 210 of the Laws of 1990 lingered in the RSSL until Chapter 57 of the Laws of 2010, signed into law on August 11, 2010, restored the aggregate funding language as a technical correction attached to a more major reform.

With the return to the aggregate funding method, employer contribution rates in ERS were expected to increase. To prevent budget crises among participating employers in ERS, where non-GLIP billing rates were zero under PUC, the Comptroller devised a plan to cap non-GLIP rates at zero for the FYE 1995, increasing non-GLIP rates by 1.5\% per year until 1999, when capping would cease. However, due primarily to excellent investment gains, the capping only applied with FYE 1995, FYE 1996, and FYE 1997 billing.

In FYE 2001, a market correction (the "dotcom" bubble) coupled with benefit-enhancing legislation (see "Historical Legislation Revising Benefit Structures") resulted in non-zero normal costs in ERS.

On May 14, 2003, a comprehensive reform program, Chapter 49 of the Laws of 2003, was signed into law. The intent was to (1) strengthen the long-term fiscal health of the System by mandating a minimum annual contribution rate of $4.5 \%$ plus GLIP, and (2) provide budget certainty for all participating employers by requiring that the actuarial valuation undertaken on the first day of a fiscal year be used to calculate employer billing rates for the next succeeding year. Therefore, the April 1, 2002 actuarial valuation was used to calculate employer contribution rates for (i) the FYE 2003 before the law changed, and (ii) the FYE 2004 after the law changed. The billing rates established for FYE 2004 billing were below the new minimum level, and therefore the 4.5\% minimum was invoked for both ERS and PFRS. Thereafter, employer contribution rates have risen, and the minimum has not been utilized since.

Amidst municipal budget shortfalls and stress caused by the global financial crisis of 2008, the NYS Legislature aimed to provide some additional billing rate smoothing (the asset volatility was more than could be smoothed by the AVA method alone) for participating employers who were faced with sharply increasing employer contribution requirements. A direct rate-smoothing amortization and reserve program was designed by NYSLRS leadership and became known as the Contribution Stabilization Program (CSP).

The Employer Contribution Stabilization Program was signed into law on August 11, 2010 as Chapter 57 of the Laws of 2010. This statute gives employers the option to amortize a portion of their annual pension costs. Amortized amounts are paid in equal annual installments over a ten-year period, and employers may prepay these amounts at any time. Interest is charged at a rate which approximates a market rate of return on taxable fixed rate securities of a comparable duration.

The Alternate Contribution Stabilization Program was signed into law on March 29, 2013 as Chapter 57 of the Laws of 2013. This statute gave certain employers a one-year window during which they could choose the option to amortize a portion of their annual pension costs. Amortized amounts are paid in equal annual installments over a twelve-year period, and employers may prepay these amounts at any time. Interest is charged at a rate comparable to a twelve-year Treasury bond plus one percent.

Chapter 55 of the Laws of 2023 (specifically Public Protection and General Government Article 7 Budget Bill Part W) amended both versions of the Contribution Stabilization Program to allow employers to withdraw from the program and made other technical revisions. Should an employer elect to withdraw, all outstanding amortizations must be paid in full. Should NYSLRS have a reserve fund for the withdrawn employer, the employer's future contribution requirements will be reduced by the amount that would be eligible for amortization if the employer had not withdrawn until the reserve fund is depleted. Once the reserve fund is depleted, a withdrawn employer will be permitted to re-enroll in the Employer Contribution Stabilization Program.

Chapter 94 of the Laws of 2015, signed into law on July 30, 2015, revised the employer billing administrative practices. The intent was to (1) ensure that all salary paid to members was included in billable salary, and (2) simplify the administration of employer billing to improve budget certainty for all participating employers. Instead of billing upon the salary of active members at FYE, which meant that the billable salary was not known on the billing date necessitating a reconciliation in the next year, the new law required billing upon all reported salary in the prior fiscal year thereby eliminating the need for reconciliation and including salary paid to decremented participants. Consequently, the salary reported in FYE 2015 was used to calculate employer contribution requirements (i) due on February 1, 2015 before the law changed, and (ii) due on February 1, 2016 after the law changed.

## Calculation of the Actuarial Value of Assets

For the April 1, 2021 valuation, the actuarial value of assets (AVA) was set equal to the fair value of assets. Subsequently, the AVA was determined by applying the assumed return on investments (equal to $5.9 \%$ from April 1, 2021 through present) to the financial statement plan net position with adjustments for cash flow (contributions and deductions). This smoothing method expects and immediately recognizes the assumed return on assets while phasing in unexpected gains/losses over an eight-year period. Realized and unrealized gains are treated in the same manner.

The Group Term Life Insurance Plan assets appreciate at the same rate as our short term investment pool.
In the April 1, 2023 valuation of the two systems for fiscal year 2025 billing, the difference between accounting invested assets and actuarial invested assets was:

|  | Assets <br> (millions of dollars) |
| :--- | :---: |
| Accounting | 249,508 |
| Smoothing Adjustment | 20,088 |
| Actuarial | 269,596 |

The development of the actuarial value of assets is as follows:

1. Formulas to smooth Fair Value (FV) of Net Assets Held in Trust for Pension Benefits

Employee Contributions ( $\mathrm{C}^{\mathrm{EE}}$ ) and Deductions (D) are roughly paid evenly throughout the year.
An average date of $10 / 1$ is assumed ( 6 months before fiscal year end).
Employer Contributions (C ${ }^{\text {ER }}$ ) are primarily collected on $12 / 15,2 / 1$, and $3 / 1$.
An average date of $2 / 1$ is assumed ( 2 months before fiscal year end).
Actual Gain: $\quad \mathrm{AG}_{\mathrm{T}}=\mathrm{FV}_{T}-\mathrm{MV}_{T-1}-\mathrm{CE}_{\mathrm{T}}+\mathrm{D}_{\mathrm{T}}-\mathrm{C}^{E R}{ }_{T}$
Expected Gain: $\quad E G_{T}=5.9 \% * V_{T-1}+(1.0596 / 12-1) *\left(C^{E E} E_{T}-D_{T}\right)+\left(1.059^{6 / 12}-1\right) * C^{E R}{ }_{T}$
Unexpected Gain: $U G_{T}=A G_{T}-E G_{T}$
Demonstration supporting gain formulas:
$\mathrm{UG}_{\mathrm{T}}=\mathrm{FV}_{\mathrm{T}}-1.059{ }^{*} \mathrm{~F}_{\mathrm{VT-1}}-1.059^{6 / 12}$ * $\left(\mathrm{C}^{E E_{T}}-\mathrm{D}_{\mathrm{T}}\right)-1.059^{2 / 12}$ * $\mathrm{C}^{E R}{ }_{T}$
$\mathrm{UG}_{\mathrm{T}}=\mathrm{FV}_{T}-\left(1.059{ }^{*} \mathrm{~F}_{\mathrm{VT}-1}+1.059^{6 / 12}{ }^{*}\left(\mathrm{C}^{E E}{ }_{T}-\mathrm{D}_{\mathrm{T}}\right)+1.059^{2 / 12}{ }^{*} \mathrm{C}^{\mathrm{ER}}{ }_{\mathrm{T}}\right)$
$\mathrm{UG}_{\mathrm{T}}=$ Actual Assets - Expected Assets
Smoothing Adjustment: $S_{T}=-87.5 \% U_{T}-75.0 \% U G_{T-1}-62.5 \% U_{T-2}-50.0 \% U_{T-3}$

$$
-37.5 \% U G G_{T-4}-25.0 \% U G G_{T-5}-12.5 \% U G_{T-6}
$$

Actuarial Value of Assets: $\mathrm{AV}_{\mathrm{T}}=\mathrm{FV}_{\mathrm{T}}+\mathrm{SA}_{\mathrm{T}}$
2. ERS Financial Statement Data, Gains, Smoothing Adjustment, \& Actuarial Value of Assets

| FYE | Employee \& Other <br> Contributions (C $\left.{ }^{\mathrm{EE}}\right)^{\star}$ | Deductions (D) | Employer Contributions <br> (C토 | Fair Value (FV) <br> of Net Assets |
| :---: | :---: | :---: | :---: | :---: |
| $3 / 31 / 2021$ | - | - | - | $220,580,583,468$ |
| $3 / 31 / 2022$ | $604,676,137$ | $12,648,391,196$ | $4,528,207,091$ | $232,049,473,514$ |

## Section II: Employer Contribution Rates

## Table 6: ERS Rate Comparison

Employer rates for fiscal years 2024 and 2025, and expected long term-rates.
Table 7: ERS Rate Comparison
Employer rates for fiscal years 2024 and 2025, and expected long term-rates.

Expected long-term rates are those rates that would be established if we consistently earned the annual rate of return and achieved all other actuarial assumptions. Generally these rates are established every five years, at the close of the quinquennial study, and are only modified when there are significant changes in assumptions or benefits. Long-term rates were last modified with the April 1, 2022 valuation due to revised assumptions.

Unless noted, rates include normal, administrative and GLIP. They exclude any rate or contribution due to prior years' adjustments, deficiency, and, for non-state, certain electable benefits such as credit for unused sick leave, one-year final average salary, and the 75\% performance of duty disability benefit for certain counties. State rates include unused sick leave, if appropriate.

30 | Section II: Employer Contribution Rates

## Section III: Employer Contributions

Table 8: Comparison of Estimated (2/1) Employer Contributions by Tier
2024 and 2025 estimated employer contributions by tier.
Table 9: Comparison of Estimated (2/1) Employer Contributions by Major Group
Estimated contributions attributable to the year by major group. ${ }^{1}$
Actual 2024 and 2025 contributions may differ due to any remaining amortization payments or credits and reconciliation of previous years' bills.

Note: Contributions are calculated without recognizing any amounts eligible for amortization under Chapter 57 of the Laws of 2010 or Chapter 57 of the Laws of 2013.

[^2]Table 8: Comparison of Estimated (2/1) Employer Contributions by Tier
(in millions of dollars)

Fiscal Year Ending 2024

| ERS |  |  |  | PFRS |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Tier | Reported Salary | Contribution | Average Rate | Tier | Reported Salary | Contribution | Average Rate |
| 1 | \$ 41.1 | \$ 8.2 | 19.9\% | 1 | \$ 0.6 | \$ 0.2 | 36.1\% |
| 2 | 46.3 | 8.4 | 18.2\% | 2 | 2,459.7 | 783.0 | 31.8\% |

## Section IV: Member Data

## Table 10: Tier Distribution

Number, salary, and contributions of active members (members earning salary) at fiscal year end for the last two years.
Table 11: Active Members by Tier within Major Group
Number of active members and their salary by tier within major group. ${ }^{1}$

Table 12-A: ERS Active Members
Number of active members and their salary in 5-year age and service groups for each major group by system.

Table 12-B: PFRS Active Members
Number of active members and their salary in 5-year age and service groups for each major group by system.

Table 13: Inactive Members
Number of inactive members and their average salary in 5-year age and service groups for each major group by system.

Note: Comparison of Average Salary between tables from different years may be distorted by unequal number of pay periods in each year.

## Section V: Pensioner Data

## Table 14-A: ERS Service Pensioners

Number, Average FAS (Avg FAS), and Average Option 0 Benefit including COLA (Avg Pen) for pensioners in 5-Year age groups by major group ${ }^{1}$ within system.

Table 14-B: ERS Disability Pensioners
Number, Average FAS (Avg FAS), and Average Option 0 Benefit including COLA (Avg Pen) for pensioners in 5-Year age groups by major group ${ }^{1}$ within system.

Table 14-C: PFRS Service Pensioners
Number, Average FAS (Avg FAS), and Average Option 0 Benefit including COLA (Avg Pen) for pensioners in 5-Year age groups by major group ${ }^{1}$ within system.

Table 14-D: PFRS Disability Pensioners
Number, Average FAS (Avg FAS), and Average Option 0 Benefit including COLA (Avg Pen) for pensioners in 5-Year age groups by major group ${ }^{1}$ within system.

## Table 15-A: Number of Pensioners

Number and Average Modified Option 0 Benefit, both with and without COLA, by calendar year of retirement for each system.
Table 15-B: Number of Beneficiaries Eligible for COLA
Number and Average Modified Option 0 Benefit, both with and without COLA, by calendar year of retirement for each system.

## Table 15-C: Total Pensioners and Beneficiaries

Number and Average Modified Option 0 Benefit, both with and without COLA, by calendar year of retirement for each system.
Table 15-D: ERS Service and Disability Pensioners
Counts by Modified Option 0 Benefit plus COLA ranges.
Table 15-E: PFRS Service and Disability Pensioners
Counts by Modified Option 0 Benefit plus COLA ranges.
Table 16: New Retirements By Tier Within Fiscal Year
Number of new pensioners by tier for the last four years for each system.

Note: An Option 0 benefit refers to the unreduced single life allowance, while the Modified Option 0 Benefit is the maximum annual allowance after reduction for any partial lump sum distribution.

PFRS

| Status | Members | Receiving Benefits |  |  |  |  | Total Receiving Benefits | All |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Service <br> Pension | Ordinary Disability | Accidental Disability | Accidental Death | Other \& Beneficiary |  |  |
| As of 4/1/2022 | 35,199 | 30,307 | 324 | 5,997 | 179 | 2,452 | 39,259 | 74,458 |
| Increases during year |  |  |  |  |  |  |  |  |
| New employees |  |  |  |  |  |  |  |  |
| Transfer from other system |  |  |  |  |  |  |  |  |
| Total Increases | 2,550 | 1,502 | 4 | 263 | 5 | 219 | 1,993 | 4,543 |
| Decreases during year |  |  |  |  |  |  |  |  |
| Resignation or dismissal | 187 |  |  |  |  |  |  |  |
| Service retirement | 1,499 |  |  |  |  |  |  |  |
| Disability retirement - accidental | 143 |  |  |  |  |  |  |  |
| (includes performance of duty) |  |  |  |  |  |  |  |  |
| Disability retirement - ordinary | 5 |  |  |  |  |  |  |  |
| Death - accidental | 1 |  |  |  |  |  |  |  |
| Death - ordinary | 34 |  |  |  |  |  |  |  |
| Transfer to other system | 126 |  |  |  |  |  |  |  |
| Total Decreases | 1,995 | 918 | 11 | 134 | 6 | 115 | 1,184 | 3,179 |
|  |  |  |  |  |  |  |  |  |
| As of 3/31/2023 | 35,754 | 30,891 | 317 | 6,126 | 178 | 2,556 | 40,068 | 75,822 |

Note that member decreases due to accidental death or disability do not necessarily match increases in those receiving benefits. Benefits involving hearings may have started as "lesser" benefits. For example, a disability retirement may have originated as a service retirement.

## Section VII: Change in Contributions

Table 18: New York State and Local Employers Analysis of Change in Contributions
Change in contributions from the 2/1/2024 billing to the $2 / 1 / 2025$ billing. Amortization payments and reconciliation of prior years' bill are not included in these figures.

Chapter 49 of the Laws of 2003 requires a minimum annual contribution rate of $4.5 \%$ (in addition to certain other payments), and that the valuation undertaken on the first day of a fiscal year is to be used to calculate rates for the next succeeding year. The 4/1/2023 actuarial valuation is used for the calculation of the fiscal 2025 rates.

## Section VIII: Historical Trends

Table 19: New York State and Local Employers
Salaries, Employer Contributions and Average Rates by Fiscal Year
Trends in salaries, employer contributions and average employer contribution rates. Beginning in fiscal year 1996, the State can pay its bill on or before March 1. Prior to 2006, participating employers paid their bill on December 15. Beginning in 2006, the payment date was changed to February 1 with the option to pay on December 15 to realize interest savings.

Table 20: Historical Employer Contribution Average Rates

Note: Amortizations and reconciliations of prior bills are not reflected in these tables.
Beginning with fiscal year 2012, deficiency and incentive costs have been excluded from both the amount of contributions and the calculation of the average rate of contribution.

Beginning with fiscal year 2017, there was an administrative change to bill on all pensionable salary within a fiscal year. Prior to this change, an employer was billed only for members who were active (receiving salary) on the last day of the plan year.

## Table 19: New York State and Local Employers

 Salaries, Employer Contributions and Average Rates by Fiscal YearThe annual actuarial valuation determines the amount and timing of employer contributions. Individual billing rates for each tier-plan combination are calculated reflecting the relative lucrativeness of the benefits offered. If all actuarial assumptions were perfectly realized, the individual tier-plan billing rates would never change. However, even if the billing rates never changed, the dollar value of employer contributions collected each year will vary with shifts in member composition and billable salary, which are assumed to occur over time. To understand the impact of unexpected changes in membership composition and billable salary on the actual employer contributions paid annually, this table compares the employer contributions, billable compensation, and the resulting average billing rate ( = contributions / compensation ) that was estimated in the actuarial valuation with the actual billing results two years later.

| Employees' Retirement System |  |  |  |  |  |  |  |  |  |

Office of the New York State Comptroller Thomas P. DiNapoli

[^0]:    ${ }^{1}$ While a Tier 2 existed in ERS, it was closed to new members after July 27, 1976. The same law would have closed Tier 2 in PFRS, but the benefits persisted by way of 2-year temporary extensions. The collection of extender bills would represent the most significant benefit enhancement for members of PFRS Tier 2. Ultimately, Governor Paterson vetoed the extender bill, ending Tier 2 in PFRS effective July 1, 2009. For a short period, between July 1, 2009 and January 8, 2010, new memberships were covered under Tier 3. Members eligible for Tier 3 benefits in PFRS are commonly called the "bubble members."
